Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 Excerpt: .ran between 110 and 119 lbs. per square inch, and the temperature of the air varied from 50 to 81F. in the various tests. For the purposes of these tests about 60 feet of standard 8-inch wrought pipe, coupled together, in order to make it smooth and regular, was suspended where it could not be subjected to currents of air. In order to get the steam as dry as possible it was sent through a separator on its way to the test pipe, and in the short connection between the separator and the pipe was placed a throttling calorimeter. The test pipe had an inclination of one foot in its entire length, which insured drainage of all the water of condensation to the lower end, at which point the receiver was connected, and into which the water gravitated as rapidly as formed. The water was measured in this receiver, which consisted of four feet of 12-inch pipe, with graduated water glasses attached near the top and bottom. The same volume of water was allowed to collect each time, was measured under the steam pressure, and blown from the receiver at the end of the run. A careful determination was made of the amount of water collected by weighing the same volume while cold, and correcting for difference in weight due to the difference in temperature for the respective runs. The tests were made upon a scale large enough--in fact, upon a pipe of the size and...
